Member of Technical Staff and Fullstack Software Engineer with 2.5+ years architecting end-to-end features across React, Node.js, TypeScript, and AWS. Built and own 20+ production integrations serving 100K+ users at 1000+ req/sec with 99.9% uptime. Expertise in distributed systems, microservices, event-driven architecture, design systems, and performance engineering. Recognized with the Dashing Debut Award and elevated to MTS for platform-level ownership and technical leadership in fast-paced SaaS environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go, Rust, SQL, HTML5, CSS3, SCSS

Frontend: React.js, Next.js, Vue.js, Redux, Redux Toolkit, Redux-Saga, Zustand, TanStack Query, TailwindCSS, Chakra UI, Radix UI, Framer Motion, Lexical, Reactflow, Micro-Frontends, Module Federation, Web Vitals, A/B Testing, Feature Flags, i18n, Accessibility (WCAG 2.1 AA)

Backend & APIs: Node.js, Express.js, FastAPI, Hapi, REST APIs, GraphQL, gRPC, WebSockets, Server-Sent Events, OAuth 2.0, OIDC, JWT, RBAC, Webhooks, API Gateway, Rate Limiting, Microservices

Databases: PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch, Firebase, Supabase, Cloudinary, BigQuery, Databricks

Cloud & DevOps: AWS (S3, EC2, CloudFront, API Gateway, Lambda), GCP, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Sentry

AI & LLM Tools: Claude, Claude Code, OpenAI, Cursor, MCP (Model Context Protocol), Agentic Workflows, Multi-Agent Orchestration, LLM Routing, RAG

Testing & Tooling: Jest, Vitest, Storybook, Docusaurus, Zod, Biome, Webpack, pnpm workspaces, Turborepo, Figma

Methodology: Full Stack Development, System Design, Distributed Systems, Event-Driven Architecture, Test-Driven Development, Agile, Scrum, Technical Leadership, Code Reviews, Architecture Design, RFC Writing, On-Call

PROFESSIONAL EXPERIENCE

Member of Technical Staff - SurveySparrow

01/2024 - Present | Chennai, India

- Architected, shipped, and maintained **10+ production-grade integrations** (Jira, Zoho CRM, BigQuery, Databricks, Google Sheets, Google Chat, Microsoft Fabric, IBM watsonx, Oracle ADW) achieving **99.9% uptime** while handling 1000+ requests/sec. Designed bi-directional sync protocols (OAuth 2.0, OIDC, webhooks, polling) ensuring eventual consistency and zero data loss for mission-critical enterprise workflows.
- Established **multiple authentication flows** — client credentials, key-based, OAuth authorization code, and refresh-token — for SurveySparrow third-party integrations, enabling secure connections and reliable polling across enterprise data sources.
- Designed and shipped **@sparrowengg/integrations-templates-frontend**, a reusable React design system with TypeScript-first architecture, Storybook documentation, semantic versioning, and WCAG 2.1 AA accessibility compliance. Adopted across 20+ integrations and **100K+ users**, achieving **30% dev-time reduction**, 40% faster onboarding, and 99.9% component API stability across releases.
- Optimized frontend performance to **Lighthouse 88 (52→88)** via code splitting, lazy loading, dynamic imports, and module federation. Improved Core Web Vitals: **LCP 4.2s→2.1s**, **FID <200ms**, **CLS <0.1**. Cut bundle size by 40% and build time by 35% through tree-shaking and dependency optimization, driving a 15% increase in mobile conversion.
- Implemented a comprehensive **testing pyramid** (Jest unit + integration) achieving **85%+ code coverage** on critical paths, reducing production issues by 60%, **MTTR 45min→15min**, and preventing 95%+ regressions via pre-commit hooks and CI gating. Architected **ETL pipelines processing 100K+ monthly survey records** with schema validation and dead-letter-queue handling targeting BigQuery, Databricks, Microsoft Fabric, Azure, AWS S3, IBM watsonx, and Oracle ADW.
- Architected the **SurveySparrow Workflows platform** for synchronous and asynchronous automation, leading the **v2→v3 migration** with zero downtime; introduced **conditional branching**, **parallel multi-action execution**, and streamlined execution graphs.
- Orchestrated workflow actions — **parallel, simultaneous, and delayed execution** — using **BullMQ**-backed job queues and **cron jobs** for delayed and scheduled actions, ensuring reliable, ordered processing of complex automation flows.
- Built the **Ticketing module** with **live reply** and **automated ticket updates via Server-Sent Events** (with WebSocket fallback), reducing data latency from 3s→1.2s (60%) with automatic reconnection and conflict resolution; integrated Lexical editor for collaborative rich-text replies and inline ticket actions.
- Built a **Salesforce-grounded RAG knowledge base** with vector embeddings and semantic retrieval to unblock the customer support team — reducing support ticket volume and response time significantly by surfacing accurate, context-aware answers from internal documentation in real time.
- Built **end-to-end CI/CD infrastructure** with Jenkins and GitHub Actions, automating build pipelines and release versioning — cutting deployment time by 70%; developed shared npm packages reducing code duplication by 35%, and migrated docs to Docusaurus with OpenAPI Playground.
- Expanded platform capabilities by introducing **Vue 3 alongside React** for cross-ecosystem interoperability; built Jira integration (Atlassian Forge, OAuth 2.0) with bi-directional sync processing thousands of events daily, reducing manual customer effort by 50%.
- Built **product log observability** with **Elasticsearch** querying and query optimization, establishing structured logging and Sentry-driven monitoring — accelerating debugging and ensuring sub-second log retrieval at scale.
- Built **scheduled Slack insights notifications** using **TimeRelic cron jobs**, delivering recurring, time-based analytics digests and eliminating manual reporting.

Project Trainee - BOSCH Global Software Solutions

07/2023 - 09/2023 | Coimbatore, India

- Automated end-to-end testing workflows using **Robot Framework**, reducing manual QA effort by 50% and improving release reliability across distributed services.
- Re-engineered performance-sensitive backend modules in **Rust achieving 2-3x faster execution** and improved memory efficiency; integrated Rust with Python via **PyO3** enabling high-performance interoperability and informing architectural decisions for distributed systems at scale.

EDUCATION

Bachelor of Technology, Information Technology — Government College of Technology, Coimbatore

03/2020 - 03/2024

AWARDS & RECOGNITION

- Member of Technical Staff**, SurveySparrow (2026) — recognized for platform-level ownership across 10+ integrations, React design system serving 100K+ users, and enterprise ETL pipelines.
- Dashing Debut Award**, SurveySparrow (2024) — awarded for rapid shipping velocity, technical excellence, and cross-functional impact across 200+ enterprise customers.
