Full Stack Software Engineer with 2+ years designing and shipping end-to-end features across React, Node.js, TypeScript, and cloud platforms. Built 20+ production integrations powering 100K+ users with 1000+ requests/sec. Expertise in responsive component architecture, distributed system optimization, and mission-critical reliability. Proven track record mentoring engineers and owning outcomes in fast-paced SaaS environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go, Rust
Frontend: React.js, Next.js, Vue.js, React Native, Expo, Redux, Redux Toolkit, Redux-Saga, Zustand, TanStack Query, React Navigation, Reanimated, React Flow, Tailwind CSS, Chakra UI, Radix UI, Framer Motion, Lexical, Zod, Jest
Backend & APIs: Node.js, Express.js, FastAPI, Hapi, REST APIs, GraphQL
Databases: PostgreSQL, MongoDB, MySQL, Firebase, Redis, Elasticsearch, Supabase, Cloudinary
Cloud & DevOps: AWS (S3, EC2, CloudFront, API Gateway), GCP, Docker, Jenkins, CI/CD
AI & LLM Tools: Claude, Claude Code, OpenAI, Cursor, MCP, Agentic Workflows, Multi-agent Orchestration, LLM Routing
Tools & Platforms: Figma, Webpack, Docusaurus, Google Analytics, Biome, Vitest, pnpm workspaces, Turborepo, Storybook
Methodology: Full Stack Development, Agile, Scrum, System Design, Test-Driven Development, Event-Driven Architecture

PROFESSIONAL EXPERIENCE

Software Engineer, Frontend — SurveySparrow 01/2024 – Present | Chennai, India

- **Owned end-to-end architecture and delivery** of **10+ production-grade integrations** (Jira, Zoho CRM, BigQuery, Databricks, Google Sheets, Google Chat) achieving **99.9% uptime** while handling **1000+ requests/sec**. Designed bi-directional sync protocols (OAuth 2.0, webhooks, polling) ensuring eventual consistency and zero data loss for mission-critical enterprise workflows.
- **Owned design and delivery** of a **reusable component library** with TypeScript-first architecture, Storybook documentation, semantic versioning, and **WCAG 2.1 AA** compliance — adopted **across multiple product modules and 20+ integrations** (100K+ users), driving **30% dev time reduction**, **40% faster onboarding**, and **99.9% API stability**.
- Optimized frontend performance achieving **Lighthouse 88 (52→88)** with code splitting, lazy loading, dynamic imports, and module federation. Reduced Core Web Vitals: **LCP 4.2s→2.1s**, **FID < 200ms**, **CLS < 0.1**. Reduced bundle size by **40%** and build time by **35%** through tree-shaking and dependency optimization. Improved mobile experience enabling **15% increase in mobile conversion**.
- Built **responsive, SEO-optimized** Next.js pages (semantic HTML5, JSON-LD, Open Graph, SSR/ISR) — improving **organic search visibility 30%+** across integration listings.
- Implemented a comprehensive **testing pyramid** (Jest unit tests) achieving **85%+ code coverage** for critical integration paths. Reduced production issues by **60%**, **MTTR from 45min→15min**, and prevented **95%+ regression issues** before deployment. Added pre-commit hooks preventing bad code merges.
- Architected and deployed **ETL pipelines processing 100K+ monthly survey records** with data quality checks and schema validation for BigQuery, Databricks, Microsoft Fabric, Azure, AWS S3, IBM watsonx, and Oracle ADW.
- Implemented **Server-Sent Events (SSE)** with WebSocket fallback for real-time updates reducing data latency from **3s→1.2s (60%)** with automatic reconnection and conflict resolution. Designed a **visual workflow builder** (React Flow) supporting **100+ templates** with conditional logic branching enabling users to create custom automation without coding. Integrated Lexical editor for collaborative content editing and dynamic customization.
- Developed **shared npm packages** for UI and utilities reducing code duplication by **35%** across multiple applications; migrated developer documentation to Docusaurus with OpenAPI Playground improving API adoption and reducing integration time.
- Expanded platform capabilities by introducing **Vue 3 alongside React** enabling interoperability across frontend ecosystems; built **Jira integration (Atlassian Forge, OAuth 2.0)** with bi-directional sync processing thousands of events daily reducing manual effort by **50%**.
- Implemented **structured logging and Elasticsearch-based querying** improving debugging speed and production observability across services; designed systems processing thousands of events daily with **sub-second latency** ensuring reliability for mission-critical operations.
- Progressed from frontend architecture to **platform-level ownership** — owning 10+ integrations, the multi-module React component library (100K+ users), scalable APIs (1000+ req/sec), and ETL pipelines powering enterprise analytics — earning the **Dashing Debut and Spotlight Awards** for shipping velocity, technical excellence, and cross-functional impact across **200+ customers**.

Project Trainee — BOSCH Global Software Solutions 07/2023 – 09/2023 | Coimbatore, India

- Automated end-to-end testing workflows using **Robot Framework** reducing manual QA effort by **50%** and improving release reliability.
- Evaluated and optimized backend systems across Go, Python, and Rust; re-engineered performance-critical modules into Rust achieving **2–3x faster execution** and improved memory efficiency, informing architectural decisions for distributed systems at scale.
- Integrated **Rust with Python using PyO3** enabling high-performance interoperability for compute-intensive workflows; benchmarked system performance across implementations influencing backend architecture decisions.

EDUCATION

Bachelor of Technology, Information Technology — Government College of Technology, Coimbatore 03/2020 – 03/2024
