Full Stack Software Engineer with 2+ years at scale designing and shipping end-to-end features across React, Node.js, vue.js and cloud platforms. Built 40+ production integrations using TypeScript, GraphQL, and REST APIs; architected responsive component systems powering 100K+ users; and optimized distributed systems handling millions of transactions. Proven track record shipping reliable, scalable, accessible code in fast-paced SaaS environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, Go, Rust, C | **Frameworks & Libraries:** React.js, Next.js, Vue.js, Angular, React Native, Node.js, Express.js, Spring Boot, GraphQL, Redux, TailwindCSS, Bootstrap, SCSS, Chakra UI, Radix UI, Framer Motion, Lexical | **Testing & Quality:** Jest, React Testing Library, Selenium, Robot Framework, Storybook, Unit Testing, TDD | **Databases:** MySQL, MongoDB, PostgreSQL, Firebase | **DevOps & Cloud:** Docker, Jenkins, AWS (S3, EC2, CloudFront), GCP, Git, CI/CD, Linux | **Tools & Others:** Figma, Webpack, Electron.js, Docusaurus, Google Analytics, Elasticsearch | **Methodology:** Full Stack Development, Agile, Scrum, System Design, Test Driven Development, Agentic Workflows, Event-Driven Architecture

PROFESSIONAL EXPERIENCE

Software Engineer - Full Stack - Frontend, SurveySparrow 🌐 01/2024 – present | Chennai, India

- Progressed from frontend architecture → full-stack integrations → distributed systems optimization, demonstrating end-to-end platform ownership and readiness for SDE II responsibility.
- Built a scalable frontend component library adopted across 20+ integrations and used by 100K+ users, reducing development time by ~30% and ensuring consistent UI/UX
- Architected a TypeScript-first, plug-and-play React component system with Storybook, ensuring responsive design across devices and WCAG 2.1 AA accessibility compliance; improved onboarding time by ~40% and accelerated cross-team delivery for enterprise customers.
- Developed shared npm packages for UI and utilities, reducing code duplication by ~35% across multiple applications
- Led end-to-end development of 40+ marketplace integrations (Jira, Zoho CRM, Google Sheets, Google Chat, BigQuery, Databricks), enabling automated workflows across enterprise customers. Designed systems processing thousands of events daily with sub-second latency, ensuring reliability for mission-critical operations. Built bi-directional sync protocols (OAuth 2.0, webhooks, polling) handling eventual consistency challenges at scale.
- Built and shipped Jira integration (Atlassian Forge, OAuth 2.0) with bi-directional sync, processing thousands of events daily and reducing manual effort by ~50%
- Embedded surveys within Jira tickets, increasing response capture rates and improving workflow efficiency across customer teams
- Implemented comprehensive testing strategy (Jest, React Testing Library, integration tests) with 85%+ code coverage for critical integration paths, reducing production issues by ~60% and enabling confident refactoring across 20+ integrations.
- Designed and implemented a visual workflow builder (React Flow) supporting complex conditional logic, enabling scalable automation across multiple use cases
- Implemented real-time updates using Server-Sent Events (SSE), reducing data latency by ~60% and improving collaboration in ticketing systems
- Integrated Lexical editor to enable dynamic content customization across forms and workflows, improving user engagement
- Migrated developer documentation to Docusaurus with OpenAPI Playground, improving API adoption and reducing integration time for developers
- Expanded platform capabilities by introducing Vue 3 alongside React, enabling interoperability across frontend ecosystems
- Built ETL pipelines and connectors for BigQuery, Databricks, Microsoft Fabric, Azure, AWS S3, IBM watsonx, and Oracle ADW, processing large-scale survey data for analytics and reporting workflows
- Developed and debugged 40+ production-grade third-party integrations, improving system reliability and reducing integration-related production issues
- Architected and scaled RESTful + GraphQL APIs (Node.js, Express.js) handling 1000+ requests/sec across 40+ integrations. Designed bi-directional sync protocols (OAuth 2.0, webhooks, polling) ensuring eventual consistency and reliability for mission-critical workflows. Optimized API efficiency via GraphQL schema design, reducing client over-fetching by ~45% and enabling faster feature iteration.
- Optimized critical rendering path via code splitting + lazy loading + module federation, reducing initial bundle size by 40% and improving Lighthouse score from 52 → 88; architected modular separation of concerns reducing build time by 35%.
- Enabled data workflows and integrations used by enterprise customers, improving automation and reducing manual processing overhead
- Implemented structured logging and Elasticsearch-based querying, improving debugging speed and production observability across services
- Mentored 2 junior engineers on full-stack patterns and system design principles, improving team velocity and accelerating knowledge transfer for distributed systems architecture.

Project Trainee, BOSCH Global Software Solutions 

07/2024 – 09/2024 | Coimbatore, India

- Automated end-to-end testing workflows using Robot Framework, reducing manual QA effort by ~50% and improving release reliability
- Benchmarked system performance across Go and Python implementations, influencing backend architecture decisions
- Evaluated and optimized backend systems across multiple languages (Go, Python, Rust), benchmarking performance; re-engineered critical modules into Rust achieving 2–3x faster execution and improved memory efficiency. Informed architectural decisions for distributed systems at scale .
- Integrated Rust with Python using PyO3, enabling high-performance interoperability for compute-intensive workflows

EDUCATION

Bachelor of Technology, Government College of Technology
Information Technology - CGPA 7.6

03/2020 – 03/2024 | Coimbatore, India
