🐙 <https://github.com/JanarthananGCT> 🔗 <https://jana-thoughts.vercel.app> 📄 <https://medium.com/@janarthanans.in>

Full Stack Software Engineer with 2+ years designing and shipping end-to-end features across React, Node.js, TypeScript, GraphQL, and cloud platforms. Built 40+ production integrations powering 100K+ users with 1000+ requests/sec. Expertise in responsive component architecture, distributed system optimization, and mission-critical reliability. Proven track record mentoring engineers and owning outcomes in fast-paced SaaS environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, Go, Rust, C | **Frameworks & Libraries:** React.js, Next.js, Vue.js, Angular, React Native (expo), Node.js, Express.js, Spring Boot, GraphQL, Redux, TailwindCSS, Bootstrap, SCSS, Chakra UI, Radix UI, Framer Motion, Lexical, FastAPI, Tanstack Query | **Testing & Quality:** Jest, React Testing Library, Selenium, Robot Framework, Storybook, Unit Testing, TDD | **Databases:** MySQL, MongoDB, PostgreSQL, Firebase | **DevOps & Cloud:** Docker, Jenkins, AWS (S3, EC2, CloudFront), GCP, Git, CI/CD, Linux | **Tools & Others:** Figma, Webpack, Electron.js, Docusaurus, Google Analytics, Elasticsearch, Redis, pnpm, Claude Code, cursor, OpenAI | **Methodology:** Full Stack Development, Agile, Scrum, System Design, Test Driven Development, Agentic Workflows, Event-Driven Architecture, Multi-agent orchestration, LLM routing

PROFESSIONAL EXPERIENCE

Software Engineer - Fullstack - Frontend, SurveySparrow 🌐 01/2024 – present | Chennai, India

- Architected and shipped 40+ production integrations (Jira, Zoho CRM, BigQuery, Databricks, Google Sheets, Google Chat) handling 1000+ requests/sec with bi-directional sync protocols (OAuth 2.0, webhooks, polling) ensuring reliability for mission-critical workflows across enterprise customers.
- Built scalable React component library with TypeScript-first system, Storybook, responsive design, and WCAG 2.1 AA accessibility compliance adopted across 20+ integrations and used by 100K+ users, reducing development time by 30% and improving onboarding by 40%.
- Designed and scaled RESTful + GraphQL APIs (Node.js, Express.js) with efficient schema design reducing client over-fetching by 45%, enabling faster feature iteration and supporting cross-functional integration needs.
- Optimized frontend performance via code splitting, lazy loading, and module federation reducing bundle size by 40% and improving Lighthouse score from 52 to 88; architected modular separation of concerns reducing build time by 35%.
- Implemented comprehensive testing strategy with Jest, React Testing Library, and integration tests achieving 85%+ code coverage for critical paths, reducing production issues by 60% and enabling confident refactoring across integrations.
- Built ETL pipelines and connectors for BigQuery, Databricks, Microsoft Fabric, Azure, AWS S3, IBM watsonx, and Oracle ADW processing large-scale survey data for analytics and reporting workflows.
- Implemented real-time updates using Server-Sent Events (SSE) reducing data latency by 60%, designed visual workflow builder (React Flow) supporting complex conditional logic, and integrated Lexical editor for dynamic content customization.
- Developed shared npm packages for UI and utilities reducing code duplication by 35% across multiple applications; migrated developer documentation to Docusaurus with OpenAPI Playground improving API adoption and reducing integration time.
- Expanded platform capabilities by introducing Vue 3 alongside React enabling interoperability across frontend ecosystems; built Jira integration (Atlassian Forge, OAuth 2.0) with bi-directional sync processing thousands of events daily reducing manual effort by 50%.
- Implemented structured logging and Elasticsearch-based querying improving debugging speed and production observability across services; designed systems processing thousands of events daily with sub-second latency ensuring reliability for mission-critical operations.
- Progressed from frontend architecture to full-stack integrations to distributed systems optimization demonstrating end-to-end platform ownership and readiness for SDE II responsibility.
- Mentored 2 junior engineers on full-stack patterns, system design principles, and distributed systems architecture improving team velocity and accelerating knowledge transfer.

Project Trainee, BOSCH Global Software Solutions 🌐 07/2024 – 09/2024 | Coimbatore, India

- Automated end-to-end testing workflows using Robot Framework reducing manual QA effort by 50% and improving release reliability.
- Evaluated and optimized backend systems across Go, Python, and Rust; re-engineered critical performance-critical modules into Rust achieving 2–3x faster execution and improved memory efficiency, informing architectural decisions for distributed systems at scale.
- Integrated Rust with Python using PyO3 enabling high-performance interoperability for compute-intensive workflows; benchmarked system performance across implementations influencing backend architecture decisions.

EDUCATION

Bachelor of Technology, Government College of Technology
Information Technology

03/2020 – 03/2024 | Coimbatore, India
